

Project Status report

Name:	Alok Paranjape
Community (UN SD goal):	Regina Food Bank, SDGs #2 and #12 (Zero Hunger and Sustainable Consumption)
MVP #	1
Sprint cycle dates:	Oct 22nd - Oct 31st

Project Name	Cellar Recipes
Blurb	A food inventory tracker/ recipe suggestion app, for helping clients get recipes to use items from their Food Hampers
For Week Ending	October 31st
Project Status	Red
Status Description	Was able to to more planning and initial development, but having serious trouble getting into actual development

Activities—During the past sprint cycle

Talked to John Bailey, the CEO of the Regina Food Bank. Got information about what would be useful for the project. Also got some some information on common items and recipes.

Made a Medium Fidelity Prototype in Figma

Installed Android Studio and an AVD, started on making activities/views (barely running though)

Project Issues

Not being able to develop in Android Studios without significant issues, currently, even the template applications can't run (show

Project Changes

Was previously unsure about adding onto the 271 project, but was able to get some feedback and solidify my goals on the inventory tracker/recipe suggestion, since it's something they're already interested in.

Activities—Planned for Next Week

Going through some tutorials for Android App Development, making some practice applications that actually run.

Making an isolated SQLite Database with some basic food items and recipes,

Talking to Adam about Android Studio, or Trevor about Flutter.

Possibly reinstalling android studio

Reflection

- Do you feel "on track"?
 - Definitely Not, I need to get the application to actually run and get off the ground, not to mention having multiple views and forms
- What progress do you particularly feel good (great) about?
 - I'm glad I was able to talk to someone in the community and get additional information. Also glad that he was

amenable to my initial idea.

- What barriers (if any) do you feel is/are a current impediment to success?
 - Inexperience with Android App Development. Also some technological constraints, maybe this laptop can't run it well (doubtful though).
 - What help (if any) do you require to move positively forward?
 - Need to get more experience with Android Studio, or at least pointed in the right direction for it
 - What questions or concerns do you have (if any)
 - Ask about issues with mobile applications
-
